VASU AGRAWAL

Noida, India | agrvasu05@gmail.com | github.com/agrvasu05 | linkedin.com/in/vasu-agrawal-ba985628b | agrvasu05.github.io

Education

Jaypee Institute of Information Technology, Noida 2023 – 2027
B.Tech, Information Technology · CGPA: 7.74 / 10
Coursework: Data Structures & Algorithms, Object-Oriented Programming, DBMS, Operating Systems

Indian Institute of Technology Madras (online) 2023 – 2024
BS in Data Science · Foundation Level

Technical Skills

Languages: C++, Python, JavaScript, SQL, C

Frameworks & Libraries: React, Next.js, Node.js, asyncio, Selenium, Playwright, Pandas, OpenCV

Databases & Cloud: MySQL, MongoDB, Google Cloud, Vercel, GitHub Actions (CI/CD)

Tools: Git, GitHub, Linux / macOS shell, REST APIs, FFmpeg

Experience

IndiaUnbox — *Technology Intern* May 2026 – Jul 2026 · Remote

- Built an 8-stage Python data-collection pipeline (Selenium, Playwright, aiohttp) that gathered supplier data from B2B directories including IndiaMART and ThomasNet, processing **10,000+ records**.
- Implemented a **50-worker asyncio worker pool** over a shared task queue so pages were fetched and parsed concurrently instead of one at a time.
- Cleaned, deduplicated and validated the records with Pandas into structured datasets for the sourcing team.
- Automated daily company LinkedIn posts with a Make.com workflow fed by a 28-post content queue.

Projects

Automated Video Publishing Pipeline | *Node.js, GitHub Actions, Google Cloud, Instagram Graph API* 2026

- Built a pipeline that writes scripts, generates voice-over and word-timed captions, renders videos and image posts, and publishes to Instagram **3 times a day**.
- Ran it as scheduled GitHub Actions jobs with keyless Google Cloud auth (Workload Identity Federation) and Cloud Storage hosting, with no local machine.
- Decoupled generation and publishing through a Git-tracked JSON queue so neither stage blocks the other.

NeuroSWAY — Real-Time Gait Analysis & Fall Detection | *Python, OpenCV, MediaPipe* 2025

- Built a real-time video system that tracks body pose to detect posture changes and potential falls.
- Extracted **30 biomechanical features per frame at ~20–30 FPS** for time-series analysis.

Gurguram — Mentor–Mentee Web Application | *JavaScript, Node.js, REST APIs, Zoom SDK* Jan 2025

- Implemented user login and integrated the Zoom SDK for in-app video meetings.

Achievements & Publications

- **1st Place**, Hackin' Winters Hackathon (Jan 2025): built Gurguram's backend API integration.
- Co-author, "AI-Driven Performance Management and Appraisal Systems," Routledge, 2025.
